

Supermarket Sales Analysis Dashboard

Project Objective

The objective of this project is to analyze supermarket sales data using Microsoft Excel and create an interactive dashboard to identify sales trends, customer behavior, and business performance.

Key Insights

- Food and Beverages was the highest performing product line based on total sales.
- Female customers generated higher total sales than male customers.
- Cash was the most frequently used payment method.
- Member customers generated higher total sales than normal customers.
- The dashboard helps identify monthly trends and compare sales performance across cities and product lines.

Tools Used

- Microsoft Excel.

Project Description

This project analyzes supermarket sales data using Microsoft Excel. The dashboard presents key sales trends, customer insights, and product performance to support better business decision-making.
